

PRESS RELEASE

Generalmusic by Soundion is proud to introduce the legendary Elka Panther organ as VST/AU plug-in for Windows and Mac platforms.

Bring Elka Back is Soundion's program to bring back Elka's legacy instruments available in one form or another. The Elka Panther organ VST/AU plug-in is created by Martinic, the real masters of modeling.

The Elka Panther, also known as the Capri, is a classic Italian combo organ of the 1960s. The Panther produces bold, rich organ sounds and has a wide range of tonal variations (13). The Panther's 16', 8', 4' stops and Mixture voice levels are freely adjustable. Each note spans over three octaves, the bass can be extended into the grey keys, and there is separate volume control for the bass octaves. Tone Decay adds a percussive effect to the Mixture voices. The Panther has a powerful vibrato with speed and intensity control.

The Elka Panther organ VST/AU audio plug-in is based on physical modeling (no samples inside) of a vintage Elka Panther 300 organ. A detailed list of basic and advanced features is available on www.bringelkaback.com.

Note: High resolution press pictures are available for download:
